fitting

- o The modeler has a hypothesis regarding the mathematical form of the model (s)he is building
- o It is just a matter of finding the numerical parameters that make the chosen model explain (fit) the experimental data best
- o Some deviations are going to be willingly accepted
- o Emphasis on the model •

Computational modeling techniques - Åbo Akademi

Mathematical modeling is a principled activity that has both principles behind it and methods that can be successfully applied. The principles are over-arching or meta-principles phrased as questions about the intentions and purposes of mathematical modeling. These meta-

THE MATHEMATICAL MODELING OF EPIDEMICS

A mathematical model is a description of a system using mathematical concepts and language. The process of developing a mathematical model is termed mathematical modeling. Mathematical models are used in the natural sciences (such as physics, biology, earth science,
