Read Carriere Distalizer

The Carriere Distalizer is an orthodontic device developed to correct a bite without removing permanent teeth when teeth have erupted incorrectly. With an effect similar to headgear, but without the use of a bulky appliance, the Carriere Distalizer pushes upper teeth back to create a corrected bite prior to the addition of braces.

Carriere® Distalizer™ Appliance - Thariani Orthodontics

...

The Carriere Distalizer is an orthodontic device that is formed by a small, metal bar. This bar is placed on the teeth, bonded to an upper molar tooth and an upper canine tooth. Elastic bands are used on the device to add tension. Over time, the teeth will slowly begin to shift, effectively correcting the bite.

Carriere® Motion™ with Lingual Arch as source of Anchorage ...

A Carriere Distalizer is a device that our orthodontist can install to move teeth into a safe and healthy alignment. It works by connecting an upper bar on the front teeth to an anchor point on one of the back molars with elastics. These elastic bands gently pull the teeth into place over time, just like headgear would.
